

LORENZO VIOLA  
ARCHITECT

---

PRACTICE / Our Design Firm is base in Milan.  
The company was founded in 2008  
after working for many famous and  
celebrated architectural firms in the  
Uk and Italy.

Our work represents the combination of  
experiences gained abroad together  
with the tradition, material analysis,  
research, and high quality of Italian  
design. We provide a full range of  
architectural services, developing  
feasibility studies, masterplans designing  
buildings, sustainable technologies,  
building conversions and renovations,  
interior design, and custom made  
furniture.

Each project brings different challenges  
and complexities, for which we seek to  
provide specific team collaborators,  
maximising potential of the overall  
projects aspirations in the interest of our  
clients.

PROCESS / We believe that a project of  
architecture starts with the meeting,  
developing an open dialogue with  
the client in order to understand and  
develop all details, the specific knowl-  
edge of the site including its history in  
order to maximise its potential.

Space can be modified at each different  
scale of design, redefining boundaries  
between many disciplines such as:  
Creativity, Research, Communication,  
Sustainable Technologies, Tradition,  
always referencing the relationship to  
people who will enjoy using the final  
proposals...

PROJECTS / 6 Residential Projects have been  
selected as representation of  
our work.

1 / ITALY\_ Moneglia / Building Extention  
Residenza Paradiso\_ Private Commission  
120 sqm

2 / ITALY\_ Milan / Flat Renovation

5 / ITALY\_ Ffolgaria (TR) /  
Mountain Chalet Renovation  
Private Commission  
140 sqm

6 / UK\_ London / House Renovation  
Private Commission  
420 sqm

The extension of a seaside villa in the Tigullio Gulf, has been the occasion to combine all characteristics of a seaside house in a single space.

With a precise fusion into the surrounding environment, the new luxury space faces the Moneglia bay, through light cuts and rocky walls collected by it's own excavation.

The wooden flooring melts into the bathroom rocky finishing, while the bright white of the wall gets warmed up by the okra Japanese red, lighted by the sunset.

A light minimalist colour scheme and warm wood generate a luxury and modern ambience.

Floor to ceiling windows and a glass veranda create continuity between the interior and exterior as well as floating ceiling and recessed lights give a sense of height and volume.

Craft and modernism melt into the same rooms, creating a unique variety of colours and reflections.

A visual program to develop the length of the space has been adopted, successfully differentiating functional spaces and creating at the same time order in each different area.

Located in a 1890s building, It's a home and an office space, where every element of this urban space transcend everyday reality.

White and black, day and night, natural and artificial, play a contrast as well as history and minimalism.

Original architectural structures, such as exposed brickwork and wooden ceiling, are balanced with the lightness of modernism to create an inviting and nurturing environment.

With warm colours palette and rich earth textures, the interior creates a warm cocoon from the cold world outside.

A four storeys Victorian building re defined spatially using a multi functional vertical connection, the 'mixing vlave'.

The luxurious spaces enjoy an extraordinary room height and a mix of material and colours create an elegant urban environment.

Hardwood floors define horizontal level while the library/ staircase leave a light touch on the vertical architecture.
